1. A new industrial combine, similar to the one at Sztalinváros (Dunapentele), is planned at Kazincbarcika, formerly called Sajóközine (J 79).
2. The first plant, already under construction, will have the task of processing the brown coal, mined in the area of Kazincbarcika. When completed, this plant will consist of three sections:
 - a. The Coal Classifier. The coal will be classified here according to size. The smallest variety is to be passed on to the Mátra Power Works, where it is to be transformed into electricity for the benefit of industries in the Miskolc-Diósgyőr area.
 - b. The Coke Works. It will produce coke for the combine and side products for the Hungarian chemical industry.
 - c. The Nitrogen Works. These works will produce nitrogen for agricultural use.
3. It is estimated that Kazincbarcika will have a population of 16,000, when the above factories will commence full-scale production.
